Sir:

Responsive to the Notice mailed December 6, 2002, a copy of which is attached,
Applicants respectfully request the Patent and Trademark Office to accept the attached copies
of material from our file to reconstruct its file so that the prosecution of the case can be
resumed.

The copies attached hereto are complete and accurate copies of Applicants' record of
all the correspondence between the Patent Office and Applicants (except for any U.S. patent
documents). Applicants are unaware of any correspondence between the Patent Office and
Applicants that is not among Applicants' records.

DOOR FOR REFRIGERATOR AND
METHOD OF PRODUCING THE DOOR FOR REFRIGERATOR

BACKGROUND OF THE INVENTION

5

1. Field of the Invention

The present invention relates to a door for refrigerator and a method for producing the door for refrigerator.

10 2. Description of the Related Art

Fig. 7 is a perspective view illustrating a conventional door for refrigerator. Referring to the figure, a door 1 is composed of a door panel 3, an inner panel 2, a door cap 4 which is fitting into the upper portions of the door panel 3 and the inner panel 2, and a handle 5 which is fitting into the bottom portions of the door panel 3 and the inner panel 2. Inside the housing of the door 1, a heat insulating foam material is provided.

The door panel 3 is normally painted in a single color. The door 1 is also provided with a sheet metal part which is put between the door panel 3 and the heat insulating foam material. The sheet metal is supposed to keep the door panel 3 from getting uneven on the surface by a thermal shrinkage effect of the heat insulating foam material. The sheet metal part serves both for detaching the door panel 3 from the heat insulating foam material

and for reinforcing the door panel 3.

As the conventional door for refrigerator is thus constructed, the door panel 3 would not look attractive in design if the door panel 3 has an uneven surface caused by the thermal shrinkage effect of the heat insulating foam material. For that reason, the sheet metal part is to be added both for detaching the door panel 3 from the heat insulating foam material and for reinforcing the door panel 3 so that the door panel 3 may not be stretched to cause the uneven surface by the thermal shrinkage of the heat insulating form material. Consequently, this leads to an extra production cost.

There is another problem of the conventional door for refrigerator in respect of the design of the front view of the door 1. The door 1 has such separate parts of injection as the door cap 4 and the handle 5 fitting into the door panel 3 in the upper portion and in the bottom portion, respectively. For that reason, there would be no problem to have some color pattern in the horizontal direction in the front view of the door 1 if the door cap 4 and the handle 5 are painted in a different color from that of the door panel 3. Having such color patterns in the vertical direction in the front view of the door 1, however, requires extra separate parts to be added on both sides of the door panel 3 because the door panel 3 is

painted in a single color. Consequently, this also leads to an extra production cost.

SUMMARY OF THE INVENTION

5

One of the objects of the present invention is to provide a door for refrigerator which is sophisticated in design and also cuts production cost and a method of producing the door for refrigerator.

10

This and other objects of the embodiments of the present invention are accomplished by the present invention as hereinafter described in further detail.

15

According to one aspect of the present invention, a door for refrigerator is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion. Furthermore, the door for refrigerator has a heat insulating foam material injected inside. Then, the door for refrigerator includes draw forming provided at a position near to an edge of at least either side of the door panel.

20

25

According to another aspect of the present invention,

a door for refrigerator is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion. Furthermore, the door for refrigerator has a heat insulating foam material injected inside. Then, the door for refrigerator includes draw forming provided a given position of the door panel. The door panel may have a two-tone color, and the draw forming may be provided on a boundary of colors.

According to another aspect of the present invention, a method of producing a door for refrigerator, which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, includes the step of providing draw forming at a position near to an edge of at least either side of the door panel.

According to another aspect of the present invention, a method of producing a door for refrigerator, which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a

handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, includes the steps of providing draw forming at a given position of the door panel, coloring the door panel in two-tone color, and providing the draw forming on a boundary of colors.

Further scope of applicability of the present invention will become apparent from the detailed description given hereinafter. However, it should be understood that the detailed description and specific examples, while indicating preferred embodiments of the invention, are given by way of illustration only, since various changes and modifications within the spirit and scope of the invention will become apparent to those skilled in the art from this detailed description.

BRIEF DESCRIPTION OF THE DRAWINGS

The present invention will become more fully understood from the detailed description given hereinafter and the accompanying drawings which are given by way of illustration only, and thus are not limitative of the present invention, and wherein:

Fig. 1 shows a front view of a door for refrigerator

according to a first embodiment of the present invention;

Fig. 2 is a Z-Z sectional view of the door for refrigerator of Fig. 1;

Fig. 3 is a graph illustrating a curve based on a draw forming position on each side of the door panel and a maximum amount of displacement corresponding to the draw forming position according to the first embodiment;

Fig. 4 is a graph illustrating a curve based on a draw forming position on each side of the door panel and a maximum amount of displacement corresponding to the draw forming position according to the first embodiment;

Fig. 5 is a sectional view of a door for refrigerator according to a second embodiment;

Fig. 6 is a sectional view of a door for refrigerator according to a third embodiment; and

Fig. 7 is a diagram illustrating a conventional door for refrigerator.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

20

Reference will now be made in detail to the present preferred embodiments of the invention, examples of which are illustrated in the accompanying drawings, wherein like reference numerals indicate like elements through out the several views.

25

Embodiment 1.

Fig. 1 and Fig. 2 are diagrams illustrating a door for refrigerator according to a first embodiment of the present invention. Fig. 1 shows a front view of the door for refrigerator. Fig. 2 shows a Z-Z sectional view of the door for refrigerator of Fig. 1.

Referring to the figures, a door 1 is composed of the combination of a door panel 3, which is one of the components of a front design view of the door 1, and an inner plate 2, which is provided on an inner side of the door panel 3, and a door cap 4 fitting into the combination on an upper portion and a handle 5 fitting into the combination on a bottom portion. The door 1 is provided inside with a heat insulating form material 6.

The door panel 3 is painted in two-tone color. The color of the shaded portions on the door panel 3 of Fig. 1 is different from the color of the other portions. The two-tone color may be of tones of a color with a touch of relaxation such as a combination of deep blue and light blue or of deep gray and white gray, for example.

Furthermore, draw forming is provided on the boundaries of the two-tone color on both sides of the door panel 3 by press working in such a manner as to push the center portion of the door panel 3 outwards to form a convexity.

Then, the draw forming is provided at a position of approximately ten percent (10%) of a full width of the door panel 3 away from an edge of the door panel 3 on each side.

5 Fig. 3 is a graph illustrating a relation between a draw forming position B and a maximum amount of displacement of the door panel 3 when the draw forming is provided on both sides of the door panel 3. Fig. 4 is a graph illustrating a relation between a draw forming
10 position B and a maximum amount of displacement of the door panel 3 when the draw forming is provided on either side of the door panel 3.

As illustrated in the graphs of Fig. 3 and Fig. 4, the door panel 3 gets most reinforced with a least amount
15 of displacement when the draw forming is provided at a position of approximately ten percent (10%) of the full width of the door panel 3 away from a side edge of the door panel 3. For that reason, the additional sheet metal part needed for the conventional door for refrigerator for
20 the purpose of keeping the door panel 3 from getting uneven on the surface is allowed to be eliminated.

In addition to that, the draw forming is thus provided in such a manner as to push the center portion of the door panel 3 outwards to form a convexity. For that
25 reason, it is possible to secure enough thickness for an

efficient heat insulation, thereby achieving less thermal leakage through the door 1.

Furthermore, with a standard module (500-800 in width, 1500-1800 in height) of refrigerator, if the door is designed in such a manner as to give an impression of a frame on the surface of the door on each side, the most effective ratio for the width of the frame (the ratio in which the frame is recognized most effectively) is 10% or less compared to a full width of a door in a front view. For that reason, by placing the draw forming at this most effective position, the design of the door can give the impression that the frame is on the surface of the door on each sided without adding extra separate parts of injection or the like.

Thus, as stated above, according to this embodiment, the door for refrigerator wears an accent in color on both sides of the door panel 3. Alternatively, the accent in color may be provided on either side of the door panel 3. Still alternatively, the draw forming may be provided in any position on the door panel 3 as long as the design of the door is sophisticated enough. For example, the draw forming may be provided at a center portion of the door panel 3 or at any upper and bottom portions of the door panel 3.

It is a positive effect of the door for refrigerator

of this embodiment with the draw forming provided at the position near to the edge of at least either side of the door panel that the door panel is allowed to be reinforced. For that reason, the reinforcing sheet metal needed for
5 keeping the door panel from getting uneven on the surface is eliminated. This allows the door for refrigerator to be provided at a lower production cost.

It is another positive effect of the door for refrigerator of this embodiment with the draw forming
10 provided at the position of approximately 10% of the full width of the door panel away from a side edge of the door panel that the door panel is allowed to be most reinforced.

It is still another positive effect of the door for refrigerator of this embodiment with the draw forming
15 provided in such a manner as to push the center portion of the door panel outwards to form a convexity that the heat insulating wall is allowed to secure enough thickness for producing an energy-saving door for refrigerator.

It is still another positive effect of the door for refrigerator of this embodiment with the draw forming
20 provided in the two-tone door panel that the door is allowed to wear an accent in color on both sides or either side thereof. In addition to that, the door for refrigerator of this embodiment is allowed to be provided
25 in the sophisticated design which is associated with a

frame without adding extra separate parts and at a lower production cost.

It is still another positive effect of the door for refrigerator of this embodiment with the draw forming
5 provided in any given portion of the door panel, with the door panel painted in two-tone color, and with the draw forming provided on the boundary of the two-tone color that the door panel is allowed to be reinforced, thereby eliminating the reinforcing sheet metal for keeping the
10 door panel from getting uneven on the surface. In addition to that, the door is allowed to wear an accent in color. For that reason, the door for refrigerator of this embodiment is allowed to be sophisticated in design and provided at a lower production cost.

15 According to a method of producing the door for refrigerator of the present invention, the draw forming may be provided at the position near to the edge of at least either side of the door panel. For that reason, the door panel is allowed to be reinforced, thereby
20 eliminating the reinforcing sheet metal for keeping the door panel from getting uneven on the surface. Consequently, the door for refrigerator is allowed to be provided at a lower production cost.

According to another method of producing the door
25 for refrigerator of the present invention, the draw

forming may be provided on a given portion of the door panel, the door panel may be painted in two-tone color, and the draw forming may be provided on the boundary of the two-tone color. For that reason, the door panel is
5 allowed to be reinforced, thereby eliminating the reinforcing sheet metal for keeping the door panel from getting uneven on the surface. In addition to that, the door is allowed to wear an accent in color. This allows the door for refrigerator to be sophisticated in design
10 and provided at a lower production cost.

Embodiment 2.

Fig. 5 is a sectional view of a door for refrigerator according to a second embodiment. Referring
15 to the figure, a reference numeral 7 denotes a gradation portion having a series of changes of hues. A reference numeral 8 denotes a draw forming portion which is provided on the gradation portion 7. The other portions of the door for refrigerator of Fig. 5 are the same as those discussed
20 with reference to the door for refrigerator of Fig. 2.

In order to absorb displacement caused by press working, the gradation portion 7 is provided on the boundary of the two-tone color, and the draw forming portion 8 is provided on the gradation portion 7.

25 It is a positive effect of the door for refrigerator

of this embodiment with the gradation portion provided between the colors of the two-tone door panel, and with the draw forming portion provided on the gradation portion that the displacement caused by the draw forming press
5 working is prevented.

Embodiment 3.

Fig. 6 is a sectional view of a door for refrigerator according to a third embodiment. Referring to
10 the figure, a reference numeral 9 denotes a boundary of two-tone color. The other portions of the door for refrigerator of Fig. 6 are the same as those discussed with reference to the door for refrigerator of Fig. 2 or Fig. 5.

15 The boundary of two-tone color 9 is placed in a center portion of the draw forming in consideration of displacement caused by press working, thereby allowing the press working to be done easily.

It is a positive effect of the door for refrigerator
20 of this embodiment with the boundary of two-tone color placed at the center portion of the draw forming that the press working is allowed to be done easily.

The invention being thus described, it will be
25 obvious that the same may be varied in many ways. Such

variations are not to be regarded as a departure from the spirit and scope of the invention, and all such modifications as would be obvious to one skilled in the art are intended to be included within the scope of the

5 following claims.

What is claimed is:

1. A door for refrigerator which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, the door for refrigerator comprising:

10 draw forming provided at a position near to an edge of at least either side of the door panel.

2. The door for refrigerator of claim 1, wherein the draw forming is provided at the position of approximately ten percent (10%) of a full width of the door panel away from the edge.

3. The door for refrigerator of claim 1, wherein the draw forming is provided in such a manner as to push the door panel outwards to form a convexity at a center portion of the door panel.

4. The door for refrigerator of claim 1, wherein the door panel has a two-tone color, and
25 wherein the draw forming is provided on a boundary

of colors.

5. A door for refrigerator which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, the door for refrigerator comprising:

draw forming provided at a given position of the door panel;

wherein the door panel has a two-tone color, and

wherein the draw forming is provided on a boundary of colors.

6. The door for refrigerator of claims 4 or 5, further comprising:

a gradation portion provided in the two-tone color;

wherein the draw forming is provided on the gradation portion.

7. The door for refrigerator of claim 4 or 5, wherein the boundary of the colors is provided close to a center portion of the draw forming.

8. A method of producing a door for refrigerator which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, the method of producing the door for refrigerator comprising:

10 providing draw forming at a position near to an edge of at least either side of the door panel.

9. A method of producing a door for refrigerator which is composed of a door panel made of metal, an inner panel combined with the door panel, a door cap fitting into the door panel and the inner panel in an upper portion, and a handle fitting into the door panel and the inner panel in a bottom portion, the door for refrigerator having a heat insulating foam material injected inside, the method of producing the door for refrigerator comprising:

20 providing draw forming at a given position of the door panel,

coloring the door panel in two-tone color, and

providing the draw forming on a boundary of colors.

ABSTRACT

A door for refrigerator which is sophisticated in design and provided at a lower production cost. The door
5 for refrigerator is composed of a door panel made of metal and an inner plate combined with the door panel in a facing manner, a door cap which fits into the door panel and the inner panel in an upper portion, and a handle which fits into the door panel and the inner panel in a
10 bottom portion. In addition to that, the door for refrigerator has a heat insulating form material injected inside. Then, the door for refrigerator is provided with draw forming at a position near to the edge of at least either side of the door panel.

REQUEST FOR PRIORITY

ASSISTANT COMMISSIONER FOR PATENTS
WASHINGTON, D.C. 20231

SIR:

- ☐ Full benefit of the filing date of U.S. Application Serial Number, filed, is claimed pursuant to the provisions of 35 U.S.C. §120.
- ☐ Full benefit of the filing date of U.S. Provisional Application Serial Number, filed, is claimed pursuant to the provisions of 35 U.S.C. §119(e).
- ☒ Applicants claim any right to priority from any earlier filed applications to which they may be entitled pursuant to the provisions of 35 U.S.C. §119, as noted below.

In the matter of the above-identified application for patent, notice is hereby given that the applicants claim as priority:

<u>COUNTRY</u>	<u>APPLICATION NUMBER</u>	<u>MONTH/DAY/YEAR</u>
Japan	2000-367595	December 1, 2000
Japan	2001-20192	January 29, 2001

Certified copies of the corresponding Convention Application(s)

- ☒ are submitted herewith
- ☐ will be submitted prior to payment of the Final Fee
- ☐ were filed in prior application Serial No. filed
- ☐ were submitted to the International Bureau in PCT Application Number .
Receipt of the certified copies by the International Bureau in a timely manner under PCT Rule 17.1(a) has been acknowledged as evidenced by the attached PCT/IB/304.
- ☐ (A) Application Serial No.(s) were filed in prior application Serial No. filed ; and
(B) Application Serial No.(s)
 - ☐ are submitted herewith
 - ☐ will be submitted prior to payment of the Final Fee

Respectfully Submitted,

発明の名称】 冷蔵庫の扉

【特許請求の範囲】

【請求項 1】 金属製のドアパネルと、このドアパネルに対向して組み合わされる内板と、これらの上端に嵌合するドアキャップと、下端に嵌合するハンドルとで構成され、内部に発泡断熱材を注入発泡してなる冷蔵庫の扉において、

前記ドアパネル左右両端部の少なくとも一方の近傍に絞り加工を施したことを特徴とする冷蔵庫の扉。

【請求項 2】 前記絞り加工を、前記ドアパネルの端部から該ドアパネル全幅の 10% 付近の位置に施したことを特徴とする請求項 1 記載の冷蔵庫の扉。

【請求項 3】 前記絞り加工を、凸方向が前記ドアパネルの中心が外側に出っ張る様に凸としたことを特徴とする請求項 1 記載の冷蔵庫の扉。

【請求項 4】 前記ドアパネルを 2 トーンで構成し、色の境界線上に前記絞り加工による絞り形状を設けたことを特徴とする請求項 1 乃至 3 のいずれかに記載の冷蔵庫の扉。

【発明の詳細な説明】

【0001】

【発明の属する技術分野】

この発明は、冷蔵庫の扉に関するものである。

【0002】

【従来の技術】

図 5 は従来の冷蔵庫の正面図である。図において、扉 1 はドアパネル 3 と内板 2、及びその上端に嵌合するドアキャップ 4、下端に嵌合するハンドル 5 で構成され、内部に発泡断熱材を介在させている。

【0003】

ドアパネル 3 は、通常単色である。また、ドアパネル 3 と発泡断熱材との間には、発泡断熱材の熱収縮によるドアパネルの表面凹凸防止の為、離形と補強を兼ねた板金部品が挟まれている。

INFORMATION DISCLOSURE/RELATED CASE STATEMENT UNDER 37 CFR 1.97

ASSISTANT COMMISSIONER FOR PATENTS
WASHINGTON, D.C. 20231

SIR:

Applicant(s) wish to disclose the following information.

REFERENCES

- ☒ The applicant(s) wish to make of record the references listed on the attached form PTO-1449. Copies of the listed references are attached, where required, as are either statements of relevancy or any readily available English translations of pertinent portions of any non-English language references.
- ☐ A check is attached in the amount required under 37 CFR §1.17(p).

RELATED CASES

- ☐ Attached is a list of applicant's pending application(s) or issued patent(s) which may be related to the present application. A copy of the patent(s), together with a copy of the claims and drawings of the pending application(s) is attached along with PTO 1449.
- ☐ A check is attached in the amount required under 37 CFR §1.17(p).

CERTIFICATION

- ☐ Each item of information contained in this information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this statement.
- ☐ No item of information contained in this information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application or, to the knowledge of the undersigned, having made reasonable inquiry, was known to any individual designated in 37 CFR §1.56(c) more than three months prior to the filing of this statement.

DEPOSIT ACCOUNT

- ☒ Please charge any additional fees for the papers being filed herewith and for which no check is enclosed herewith, or credit any overpayment to deposit account number 15-0030. A duplicate copy of this sheet is enclosed.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,

(OSMMN 10/98)

Door Equipment

A reference numeral (1) denotes the body of a door which is composed of an outer panel (2), an inner panel (3), a heat insulating foam material (4) being sandwiched between the outer panel (2) and the inner panel (3), and so on. The outer panel (2) is made of a steel sheet and so on. The outer panel (2) bends itself upwards in a rising manner on the both sides and then bends itself again at the rising portions in such a manner as the both ends oppose to each other. Then, the front portion (2A) of the outer panel and the rising portions (2B) on the both ends form a shield like shape. In addition to that, avoiding the right angle at a point where the front portion (2A) and each of the rising portions (2B) meet, an inclined or bowed surface is formed at each corner edge (2C) (2C) of the front surface.

Ornamental frames (5)(6) are formed at approximately the right angle to the front surface or the like at the extending portions of the front surface on the both sides, thereby forming concave portions (7)(8) with the ornamental frames each thrusting outwards between the corner edge (2C)(2C) of the outer panel (2) and an opposing marginal side edge (5A)(6A). (The concave portion (7) is omitted to be illustrated because it is formed approximately in a symmetrical manner to the concave portion (8).) A reference numeral (9) denotes a decorative band which is made of synthetic resin or the like and formed in a pole-like shape. The decorative band (9) is attached in a sticking manner to the corner edge (2C) of the outer panel (2) by means of an adhesive tape (10) or the like in a peel-able manner so that the decorative band (9) covers the corner edge (2C). In addition to that, the decorative bands (9) engage, respectively, with the both ends within the concave portions (7)(8). The decorative band (9) is covered by the ornamental frame (5)(6) in such a manner as the ornamental frame (5)(6) supports the decorative band (9). In this case, it is desirable that the both ends of the decorative band (9) are formed almost in the same shapes as those of the openings of the opposing concave portions (7)(8), respectively, and that the both ends of the decorative band (9) are press fitted in such a manner as the both ends are engaged within the concave portions (7)(8), respectively. It is additionally desirable that the decorative band (9) is flexible at a center portion, thereby allowing the center portion to have a little deflection at least, so that the both ends are allowed to be engaged, respectively, within the concave portions (7)(8) after covering the ornamental frames (5)(6) over the outer panel (2). A reference numeral (11) denotes a decorative piece attached to the decorative band (9) as required.

明 細 書

1. 考案の名称 屏 装 置
2. 実用新案登録請求の範囲

1. 一方の対向二辺を相対向方向に立上り折曲して、外板を前面辺と立上辺等とにて略矩状となすと共に、前記前面辺と立上辺との交叉角部に、面状の隅角辺を形成し、且つ、前記外板の前記立上辺を設けない他方の対向辺に端面を設けて略長尺容器状の装飾枠を嵌着し、更に、該装飾枠の隅角縁と前記隅角辺との間に外側方へ突出した凹所を形成し、且つ前記隅角辺には、両端を前記凹所内に嵌入した化粧帯を添着せしめたる事を特徴とする屏装置。

3. 考案の詳細な説明

本家は屏装置の改良構成に關し、特に全周に装飾枠を設けることなく簡略化し且つ全周に設けたのと同等の意匠的効果を奏したものである。

従来冷蔵庫等に設けられた此種屏体は、外面に露出する屏外板を鋼板等にて形成する場合、屏本体をプレス加工にて四隅面を立上つた容器状にするか、

55-54885

成いは平板の全面に合成樹脂製の化粧伸を固着して形成していた。そのため前者では成形成に精度を要し、且つ同形状で寸法の異なる機種には転用出来ず、各機種毎に成形成を要し設備が高価であり、部品点数也多かつた。又、後者では成形成は容易であるが、前面壁となる外板と化粧伸との係合箇所が多く断熱材の免洩漏防止のシール作業が煩雑であると共に、周囲方向よりの衝撃荷重に対して弱く輸送時の落下や積重ね等によつて躯体が変形破損しやすいし、損傷した場合の交換は、全周連続した化粧伸であれば面倒であり且つ高価となり、各辺別個のものであれば各辺の接合部の断熱材漏洩防止シールが一層複雑となり、総合的にはやはり前者同様欠点が多かつた。

本案に係る点に鑑みて成されたものであり、以下図について説明する。

(1)は外板(2)、内板(3)及び該両板(2)(3)間に装填した発泡性の断熱材(4)等より構成する扉本体で、側板等よりなる前配外板(2)は、一方の対向二辺を相対向方向に立上り折曲して、前面辺(2A)と立上

り二辺(2B)(2C)にて略箱状に形成すると共に、前面辺(2A)と各立上辺(2B)(2C)との交叉角部を直角にすることなく、傾斜或いは彎曲せる面状の隅角辺(2C)(2C')を夫々形成している。(5)(5)は前配外板(2)の立上辺(2B)(2C)を設けない他方の対向二辺の端部を覆つて、該外板(2)に装着した裝飾伸で、合成樹脂等にて周縁を一方は垂下し、他方は立上つて隅側縁(5A)(6A)を形成して略長尺容器状となし、且つ隅側縁(5A)(6A)の前辺及び両側辺後方には少許間隔を存して突出辺(5B)(6B)を対向形成し、前配外板(2)の前辺(2A)及び立上辺(2B)(2C)の端部を隅側縁(5B)(6B)とにて嵌合接続している。更に前配裝飾伸(5)(6)は、前部両側伸部を略直角等に形成して、前配外板(2)の隅角辺(2C)(2C')と対向せる隅側縁(5A)(6A)との間に外側方へ突出した凹所(7)(8)を形成している。(凹所(7)(8)は略対称形状であり図示は省略する、)(9)は合成樹脂等にて略棒状に形成された化粧帯で、前配外板(2)の隅角辺(2C)に接着テープ(10)等にて制離可能に密着して貼着せしめて、該隅角辺(2C)

六字挿入一字抹消
凹所(7)(8)は略対称形状であり図示は省略する、(9)は合成樹脂等にて略棒状に形成された化粧帯で、前配外板(2)の隅角辺(2C)に接着テープ(10)等にて制離可能に密着して貼着せしめて、該隅角辺(2C)

を覆うと共に、両端を前記凹所(7)(8)内に夫々嵌合し、前記両裝飾棒(5)(6)にて覆着支持している。この場合、化粧棒(8)の両端は対向する前記凹所(7)(8)の開口形状と略同形となし、該凹所(7)(8)内に夫々圧入嵌合されるのが望ましく、且つ中央部は少くとも少許撓む可塑性となして、前記裝飾棒(5)(6)を外板(2)に覆着後に、前記凹所(7)(8)に両端を嵌合可能とするのが望ましい。(11)は必要に応じて前記化粧棒(8)に嵌着した飾り片である。前記接合テープ

(4)の厚さが大なる場合には外方に露出するのを避けるため、前記化粧棒(8)に挿入用凹部(9A)を形成すれば効果的である。(14)は前記本体(11)内周縁に装着したガスケットで、取付基部(12A)と複數の相互に区画された空室(12B)(12C)(12D)等とより形成し、内方に位置した空室(12C)にモルトブレン等の弾性体材料を挿入し、被当接面に当接する空室(12D)には磁石体(14)を挿入配設している。

本発明は以上の如く構成しているため、外板は一方の対向二辺が折曲されており、断熱材のシール作業は、他方の対向二辺に嵌着した裝飾棒との間

にて行えば良く、全周化粧棒の従来に比しシール作業は半減以上に向上する。又、立上辺を形成しない他方の対向二辺の寸法を変更することによつて、容易に大ききさの異なる種類に対応出来、立上辺折曲形成用の装置は共用出来るので設備の有効利用が計れる。

更に外板の前辺と立上辺との交叉角部に面状の隅角辺を形成し、この隅角辺を化粧棒にて覆つてゐるため、正面意匠的には外板全周を化粧棒にて囲繞したと略同等の効果を奏すると共に、前記裝飾棒と相俟つて本体全周角部の保護となり、輸送時や設置時の打痕等を外板に及ぼすことから防止し、外板の装設を剝離して錆びることがなくなる。又、前記化粧棒は両端を裝飾棒にて支持され、且つ打り脱落することがなく、確実に支持され、且つ打り、隅角辺への密着状態が十分でなくとも外板より剝離により損傷した場合の交換は、断熱材に關係なく隅角辺との密着を剝離し、裝飾棒との嵌合を凹所より抜き出すことにより外せば容易に行え交換作業も簡略化出来る。

4. 図面の簡単な説明

第1図は本装置の斜視図、第2図は一部切欠せる同視断面図、第3図は完成前の同要部断面斜視図、第4図は同じく一部切欠せる完成前の要部断面図、第5図は同化粧帯の断面図である。

(5)(6)…装飾枠、(7)(8)…凹所、(9)…化粧帯。

Date Mailed: 06/06/2002

NOTICE OF PUBLICATION OF APPLICATION

The above-identified application will be electronically published as a patent application publication pursuant to 37 CFR 1.211, et seq. The patent application publication number and publication date are set forth above.

The publication may be accessed through the USPTO's publically available Searchable Databases via the Internet at www.uspto.gov. The direct link to access the publication is currently <http://www.uspto.gov/patft/>.

The publication process established by the Office does not provide for mailing a copy of the publication to applicant. A copy of the publication may be obtained from the Office upon payment of the appropriate fee set forth in 37 CFR 1.19(a)(1). Orders for copies of patent application publications are handled by the USPTO's Office of Public Records. The Office of Public Records can be reached by telephone at (703) 308-9726 or (800) 972-6382, by facsimile at (703) 305-8759, by mail addressed to the United States Patent and Trademark Office, Office of Public Records, Crystal Gateway 4, Room 335, Washington, D.C. 20231, or via the Internet.

In addition, information on the status of the application, including the mailing date of Office actions and the dates of receipt of correspondence filed in the Office, may also be accessed via the Internet through the Patent Electronic Business Center at www.uspto.gov using the public side of the Patent Application Information and Retrieval (PAIR) system. The direct link to access this status information is currently <http://pair.uspto.gov/>. Prior to publication, such status information is confidential and may only be obtained by applicant using the private side of PAIR.

Further assistance in electronically accessing the publication, or about PAIR, is available by calling the Patent Electronic Business Center at (703) 305-3028.

FILING RECEIPT

OC000000006225345

Date Mailed: 06/26/2001

Receipt is acknowledged of this nonprovisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

Date: 06/26/2001

~~CONFIDENTIAL~~

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PLEASE NOTE the following information about the Filing Receipt:

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 500 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."
- The title is recorded in sentence case.

Any corrections that may need to be done to your Filing Receipt should be directed to:

- The MAILING DATE of this communication appears on the cover sheet with the correspondence address -

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on May 3, 2001
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above, claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are objected to by the Examiner.
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

- 13) ☒ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).
- a) ☒ All b) ☐ Some* c) ☐ None of:
- ☒ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- *See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

- 15) ☐ Notice of References Cited (PTO-892) 18) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 16) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 19) ☐ Notice of Informal Patent Application (PTO-152)
- 17) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s). 2 20) ☐ Other: _____

Art Unit: 3635

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

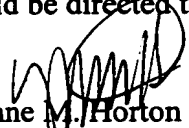

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification does not clearly define what is and/or what is meant by "draw forming".

Although "draw forming" is mentioned throughout the specifications several times, there is not clear definition as to what is intended by "draw forming". In this, the claims are incomprehensible. Clarification is required.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yvonne M. Horton whose telephone number is (703) 308-1909.
